Tailored CannaBusiness Solution

A ready to go solution for those in the medicinal and recreational cannabis sectors.

NexTec's CannaBusiness ERP is built on the award-winning Sage X3 ERP platform, which offers you true end-to-end industry specific coverage. For those operating in the medicinal and recreational cannabis sectors, it tracks; production, inventory, sales, finances, staff, compliance plus customers and suppliers in one integrated business software system.

Unlike basic ERP's, CannaBusiness ERP was designed to address the every day needs of your enterprise. The solution is built ready to go, yet still flexible enough to be localised and configured to meet your company's particular system needs.

DID YOU KNOW?

THE GLOBAL LEGAL MARIJUANA MARKET IS EXPECTED TO REACH USD \$146.4 BILLION BY THE END OF 2025.

01

SCALE YOUR BUSINESS

Importantly CannaBusiness ERP is scalable and suitable for groups operating across international borders. At all stages of the business you can scale up your journey. The nature of the CannaBusiness ERP makes it equally attractive to both start-up businesses and mature enterprises as it is a highly scalable platform suited to rapidly evolving markets where great opportunities exist to fast track your business growth.

02

MANAGE YOUR GROW OPERATIONS

The software manages the entire growing lifecycle from seed to flower including harvesting and waste management. It also manages the plant processing phase and the tracking and delivery of product.

03

COMPLIANCE

CannaBusiness ERP, is adaptable to cover the various compliance requirements around the globe. It helps to handle complicated legal mandates, supports government compliance reporting and has comprehensive materials tracking. The software also goes beyond compliance.

CannaBusiness ERP manages finance and operations in one single system and where required handles multiple sites, multiple companies, multi-legislations and multi-currency requirements.

04

INDUSTRY SPECILISATION

CannaBusiness ERP presents key business data and metrics in real time and can be presented in graphically rich dashboards, including viewing on mobile devices, These rich dashboards feature facts on cannabis strains, production costs, human resources and all your other business processes so that you can gain deep insight into your business. CannaBusiness ERP allows you to streamline operations, optimise production scheduling and helps you avoid delays due to people, equipment and material shortages.

Use the fully integrated quality control system functionality to rigorously enforce inspections, to ensure conformance to defined characteristics and measures.

05 **SEED TO SCALE & TRACEABILITY**

Become more efficient in your plant production processes. Maximise field resources and the efficiency of your clone room. Schedule production for continuous growing operations and gain full visibility over each plant with forward and backward tracking on inputs and outputs. Plant production steps including management of costs, values and location tracking from seeds, to seedling, vegetation, flowering and harvesting. A plants full lifecycle is tracked and managed seamlessly in CannaBusiness ERP.

06 **QUALITY CONTROL & RECALL MANAGEMENT**

Utilise the advanced quality control options in CannaBusiness ERP to minimise the risk of product recall or batch contamination. Introduce constant monitoring of production processes for real time management. With the forward and backward traceability, mock product recalls can be conducted in minutes, as can real recalls if needed. A full audit trail and a historical archive of transactions are maintained covering multiple years.

07 **SUPPLY CHAIN MANAGEMENT**

The CannaBusiness ERP offers advanced warehousing and logistics for single sites through to enterprises with globally disbursed warehouses allowing your local, national or international operation to run tight inventory control across raw, intermediary and finished goods and of course, packaging and plant and equipment spare parts. Manufacturers using the CannaBusiness ERP have at their disposal advanced Master Production Scheduling tools (MPS) and Material Requirements Planning (MRP) capabilities for one or multiple sites.
